

Not the same custom
you're accustomed to.

Your customers won't last if your colors fade away.

PMC[™]
Custom Color Plastic Sheet
and Rollstock Materials

www.buyPMC.com • sales@buyPMC.com • 1-877-289-7626

Custom. This term gets tossed around as a catch-all offer by a lot of plastics sheet extruders.

But at PMC, custom means focus. Focus on providing expert services and robust materials that are finely tuned to our customers' exacting needs. For each unique job, our people bring innovative thinking, niche market understanding and a commitment to finding the most effective solution. Whether it takes exceptional color matching ability. An unrivaled selection of colors and gauges. A wide range of specialized finishes. Or superior physical attributes. Our flexible expertise enables us to produce plastic sheet and rollstock materials that are **not the same custom you're accustomed to.**

Your customers want rich, vibrant colors. More than that, they want those colors to stay that way—even outside in harsh elements, every day. That's why we developed PremierKote™ and offer UV stabilizers such as SolarKote™ and Tuff-Kote™. These expert-engineered specialty coatings protect even the most exquisite colors and materials from fading and other damage wrought by the sun's ultraviolet rays. It's just one example of how, for each unique job, we're committed to delivering custom solutions that satisfy not only our customers, but their customers as well.

Solkote® is a registered trademark of Arkema.
